

Irish Wolfhound DNA Bank Blood Submission Form

To the veterinarian:

Please collect a 10 cc blood sample via routine venipuncture from each wolfhound, and place approximately 5 cc's of blood in each of two yellow-topped or purple-topped tubes. Drawing less is fine, but please try to collect at least 6 cc's. Just put approximately equal amounts of blood in each tube. Please label each tube with the wolfhound's name and the owner's name.

To the owner:

Please label all mailing containers and paperwork with your dog's name, your name, and your phone number. Please check to see animal's name and owner's name are on the blood tube labels. Please fill out the 3-generation pedigree form on the reverse side. If this is not possible, you may be contacted later. All information will remain confidential.

Mail blood samples to

Nathaniel B. Sutter, Ph.D.
Ostrander Lab, NHGRI/NIH
Building 50, Room 5347
50 South Drive, MSC 8000
Bethesda, MD 20892

*The samples do not require refrigeration if mailed within 2-3 days of collection. If mailing is delayed, please refrigerate.
You do not need to send the blood with ice or cold packs — just pack so breakage will be avoided
We deeply appreciate your generosity and helpfulness, and we thank you on behalf of all Irish Wolfhounds!.*
